The Nevada Department of Agriculture and the USDA announce a shrinking of the Exotic Newcastle Disease (END) quarantine zone. END is a highly contagious disease of all birds that results in high mortality in poultry. END was diagnosed in Northeast Las Vegas on January 16, 2003 and a quarantine on all bird movement was put in place for all of Clark County and Southern Nye County. "The new smaller quarantine zone is immediately around the infected premises" stated Dr. David Thain, Nevada State Veterinarian. Birds may now move freely outside of the quarantine zone, with bird movement allowed into the quarantine zone. Once birds move into the zone they will not be allowed to move out until the quarantine is released. "The new zone will remain in effect until sometime in early August" Thain further stated.

A toll free number for reporting sick birds and quarantine violations will remain operative for several more months. This number is (866) 490-2991. A description of the new quarantine area is: Beginning at the point where North Hollywood Boulevard enters Nellis Air Force Base; then south on North Hollywood Boulevard to East Bonanza Road; then west on East Bonanza Road to North Bruce Street; then north on North Bruce Street to State Route 604; then northeast on State Route 604 to Civic Center Drive; then north and northeast on Civic Center Drive until it becomes East Alexander Road; then east on East Alexander Road to North Pecos Road; then north on North Pecos Road to East Craig Road; then east on East Craig Road to State Route 604; then southeast along an imaginary line to the point of beginning. Below is a map of the area
